

Laminated window sills

Laminated window sills are made from high quality chipboards and they are high-pressure laminated. Suitable for using in dry rooms, where air temperature is about 20°C and relative humidity is not more than 65%.

We have two types of laminated window sills:

- window sill - straight version(thickness 23mm),
- window sill - nosed version(thickness 19mm, nose height 38mm).

Attributes:

- width 100-650mm,
- thickness straight version 23mm and nosed version 19/38mm,
- maximum length 4,1m, longer versions are produced from two parts(joining slat included),
- very strong and durable,
- does not react to light, does not change sizes,
- window sills have product quality certificate.

You can choose suitable window sill for your window from our e-shop below of product page.
