

## Window stools.

Window stools is needed to direct rain water away from the window and external walls of the building. Otherwise, the effect of long-term moisture might damage wood, metal and stone structures of the building. The window stool is installed under the window sloping outwards.

SeiCom offers for our windows:

- galvanised window stools,
- coloured window stools(RR and RAL colour chart),
- PURAL coated window stools.

Window stools can be ordered width 50-500mm and maximum length 2500mm(one piece).

- L-strips for finishing outer perimeter of windows.

L-strips can be ordered width 20-50mm and maximum length 2500mm(one piece).

You can choose proper colour for your window stool or L-strip from our colour-chart, which you can find from our E-shop, Information page.

Window stools and L-strips are normally manufactured based on the window type and requests of the customer.

Our professional sales team helps you to find the best solution for you!
