

Ventilation flaps for windows

Ventilation flaps for windows are esthetic, compact and provide effective ventilation. Ventilation flaps create a healthy indoor climate and reduce energy costs. They can be installed on any kind of window: PVC-, wood- or aluminium windows.

Flaps help control the amount of incoming air and ensure sufficient ventilation in the rooms. The amount of incoming air can be controlled based on the specific needs of the room and when directed upwards the airflow does not cause any draughts. The filter in ventilator removes dust from incoming air.

We offer for our windows high quality ventilation flap Titon S13, which is used all over the Europe widely.

Ventilation flaps are easy to install and maintain.
